Contest

Can you design technology that thinks?

It's not just the human race that is getting smarter with each passing generation; it is the technology around us as well. Today, machines are an extension of us, capable of acting, thinking, and making decisions.

What would the machines of the future look like?

This year's Innovation Jockeys wants you to answer this question. We're looking at ways that businesses and governments can create personalized customer or citizen experiences through the concepts of 'Cognitive Computing and Internet of Things' and 'Digital Application Marketplace'.

So if you're a full-time undergraduate, graduate or post-graduate student in India with a revolutionary way of looking at things, submit your innovative idea on these topics and take the biggest leap in your career!

Submit your idea before September 30, 2015 to stand a chance to win exciting prizes, get a fast-tracked job interview with Accenture, opportunities to take your idea ahead with us, participate in live projects and more.

Ready to submit your idea ?
